RIPPER BEDDER - RTDB SERIES

FOR 150 TO 200 H.P. TRACTORS

Model RTDB-32 Shown

Our Ripper Bedder's primary functions are to eliminate crop residue after harvest, allow shorter turn around time, and minimize the passes through the field. The Ripper Bedder is a 3-in-1 implement, as it rips, discs, and beds all in one pass. The front shanks rip the furrows, while the adjustable disc gangs loosen the soil and disc in the crop debris. The cone coulters blades then re-build the beds. The integrity of the row is maintained after the first pass or any additional passes. These Ripper Bedders are popular for building or re-working beds on most vegetable crops. They are an excellent implement for re-working field tomato beds after harvest, without disturbing irrigation tape. Then, when closer to planting, make another pass to finish the beds.

Working In Tomatoes

B.W. Implement Company is a designer and manufacturer of quality agricultural products, providing quality parts and service to meet its customers needs. We have been located in Buttonwillow, California since 1948. Located on the west coast, designed for tough west coast conditions.

RIPPER BEDDERS
